**TACMET II TACTICAL WEATHER STATION FOR UAV GROUND CONTROL SYSTEMS**

(Bohemia, NY) - Climatronics Corporation's EMI-hardened TACMET II tactical weather station provides real-time surface weather data for UAV operations. This rapidly deployable, compact, single-piece weather station mounts on a mast or tripod, and includes an internal flux gate compass to automatically align the wind direction data to North. The system requires extremely low power and operates from a wide variety of AC or DC power sources. Its compact size does not compete for storage or deployment space. Over 150 TACMET II's have been fielded with the US UAV units, and has been praised for its portability and reliability in this demanding tactical environment.

**ABOUT CLIMATRONICS CORPORATION**

Climatronics Corporation is a leading manufacturer of weather sensors and systems specializing in turn-key system integration and custom application. We supply and service our equipment throughout the world and maintain a complete factory calibration facility. For more information on this or other products, or to review our entire range of products and services, please visit our website [www.climatronics.com](http://www.climatronics.com) or call 631-567-7300.
